## Clear Aligner Treatment for Teens

Modern Orthodontics to Suit Your Lifestyle

## THE ACTIVE ALIGNERS DIFFERENCE

- Easy to clean
- Eat whatever you want
- 4 - 6 Dental visits
- Transparent
- Comfortable
- Removable

# THE BENEFITS OF ACTIVE ALIGNERS TEEN

With the clear comfortable technology of Active Aligners, teens can smile confidently at every step of their smile journey. Parents have the reassurance that their child is on a fast track to a straighter, healthier smile, without excessive costs in time and money.

## WHY CHOOSE ACTIVE ALIGNERS?

- Final smile outcomes are more predictable thanks to the use of CAD (Computer Aided Design) and individualised treatment planning.
- Due to teens being in a period of active growth, treatment is faster and more efficient. Recent studies have shown that aligner treatment is usually faster than traditional braces.
- All trays are delivered together to the dentist. A patient, therefore, does not need adjustments every couple of weeks but simply needs to change trays every 2 weeks (or sooner at the Doctor's discretion and as per patient compliance) with follow up appointments every 6 weeks – this means less chair time for both Doctor and patient.
- More flexibility in food choices allowing for healthy eating habits to be maintained.
- No cutting of lips and cheeks by brackets - more comfortable.
- Allows for better and more convenient oral hygiene and plaque control (it limits the risk of white spots and gingival inflammation), periodontal health (less irritation of soft tissue), and overall comfort.
- Transparent – allows for improved self-confidence.
- Fewer emergencies as compared to traditional braces – no need to skip school due to broken appliances or oral injury during contact sports. (A gum guard may be worn over the aligners if need be.)

## ARE YOU A CANDIDATE?

- **Only fully erupted permanent dentition m present. (no primary teeth or erupting teeth)**
- Both parent and teen needs to be committed, motivated and responsible - compliance is key.
- Aligners must be worn up to 22 hours a day. If not, traditional braces may be a better option.

# IT'S AS EASY AS 1, 2, 3!

## Step 1

### First impressions don't always have to last

Your Active Aligners dental professional will arrange a 3D scan or have impressions taken to determine your candidacy.

## Step 2

### Get your smile perfectly aligned

Once your treatment plan and simulated best or optimal smile is approved by your dental professional, your Active Aligners will be manufactured and ready for collection in approximately 2 weeks.

Before

After

## Step 3

### Keep your new smile forever!

Once your Active Aligners journey is complete, be sure to wear your retainers that are included in your Active Aligners package, so that your new smile lasts forever.

*love your smile*

## Active Aligners make Smiles perfectly Simple

An alternative to traditional braces, Active Aligners are known within the dental industry as clear aligner therapy.

They are clear custom made trays worn in sequence.

Final smile outcomes are predetermined thanks to CAD (computer aided design) and individualized patient treatment planning.

### SMILE CONFIDENTLY!
